

Quickstart

FME Quickstart

...for fast Workspace construction

FME* is the market leading solution for extracting and transforming spatial data, but, as with any other software, it takes time to learn its full capabilities. Our FME Quickstart service is ideal if you are a new user who needs to deliver fast results using FME.

The FME Quickstart service revolves around us working with you to develop a real life FME workbench that solves your business need there and then. Our consultant will work with you to build the workbench, describing in detail what the best options are for its construction so you can replicate these techniques in your future workbenches.

Dotted Eyes is recognised for its experience with FME. Our FME certified consultants have carried out a range of projects using FME for many customers, such as the Nuclear Decommissioning Authority, Ordnance Survey and the Environment Agency. These projects have ranged from simple data translations through to transforming, validating and conflating an organisation's data from a variety of sources and schema.

For a discussion of your requirements, call the Commercial Team on 01527 556920 or email info@dottedeyes.com.

* For more information about FME software, visit www.dottedeyes.com/fme

Benefits

- Achieve results quickly
- The mentoring option will give you the skills you need to build further Workspaces
- Good pre-cursor to classroom training

About FME

- FME is the world's only complete Spatial ETL solution that enables GIS Professionals to quickly translate, transform, integrate and distribute spatial data
- Leverage over 15 years of Dotted Eyes experience of working with Safe Software as their UK distributor to convert and integrate your data - no matter what the format - and manipulate it into the exact data model you need

Alternatives/extras

- Top up your new found knowledge with FME Desktop training (public or bespoke)
- The 5 day Extended Capability Programme
- Supplement this with our FME Support service (from £99)
