

One day seminar for **Councils** and **NHS organisations**
hosted by Dotted Eyes in conjunction with Autodesk

**CAD/GIS INTEGRATION – TURNING
THE THEORY INTO VALUE FOR YOUR
ORGANISATION.**

Autodesk

This seminar will help attendees to maximise their return on investment in CAD software. Autodesk will outline a user case study on behalf of a local council, showcasing how AutoCAD Map 3D brings together design and geographic information, and Dotted Eyes will present on key issues such as configuration, optimisation of data storage and future proofing.

Local government organisations can make significant business gains, such as better informed decision making, through the unification of traditionally separate GIS and CAD functions. Dotted Eyes, a longstanding GIS specialist, has recently become an Autodesk partner to support its mission to bring together map data, GIS and CAD software in a Unified Spatial Environment, allowing the cross-functional management of spatial data. This seminar will also outline our vision for the future, which has been built on indepth research with local government clients, and which is designed to support data sharing and INSPIRE compliance.

David Eagle and Jamie Justham from Dotted Eyes, aided by Autodesk, will be delighted to welcome you and a colleague to this event.
